Declaration of Conformity

This is to certify that the machine | group of machines indicated below conform(s) to the relevant basic safety and health requirements of the relevant EC directives in terms of their conception and design and in the form marketed by us.

This declaration shall cease to be valid in the event of any change made to the machine/group of machines after handover to the trader/user if such changes are not agreed with us.

Name of machine or group of machines: Tandem roller & combined roller
Model | Type: ARX 12, ARX 16, ARX 16 K, ARX 20
Mode of functioning: Ground compaction
Serial number: 13,000 - 18,000
Relevant EC directives:
- Machinery Directive 2006/42/EC
- Noise Directive 2000/14/EC

Applicable harmonized standards: EN 500-1, EN 500-4,
Issuing testing office for noise tests: TÜV Austria
Testing office number: 0408
Machine type as per appendix I from 2000/14/EC:
No.: 8
Conformity assessment as per appendix VIII from 2000/14/EC:
Unit verification
ISO 9001 certificate no.: 30605
Noise emissions:
Recorded sound power level: 100dB(A)
Guaranteed sound power level: 103dB(A)
Manufacturer: Ammann Schweiz AG
Address: Eisenbahnstrasse 25
CH-4901 Langenthal

Signatures:

Name: H. Queder
Mode of functioning: Plant manager
Authorized representative: Ch. Anliker
Technology Manager

The technical documents are stored in the care of the above-mentioned persons

Place, Date: Langenthal, March 2012
Preface

Congratulations on your purchase of an Ammann compaction roller.

This quality of this compaction device is characterized by simple operation and maintenance and is the product of many years of Ammann experience in the field of road roller engineering.

Because the content of the deliverable depends on the order, the features of your roller may differ in some descriptions and pictures.

In order to avoid faults due to improper operation and maintenance we request that you read this operating manual with great care and keep it for later reference.

With kind regards

Ammann Schweiz AG
Eisenbahnstrasse 25
CH-4901 Langenthal

1.1 About this manual

This manual is part of the customer documentation for the ARX 1 vibration roller. It is customer documentation of the Ammann Schweiz AG and its representatives in other countries.

1.1.1 Target audience

The target audience for this manual is the owner/operator of the ARX 4 vibration roller along with his employees who have been authorized for repair, operation and maintenance by the owner/operator.

1.1.2 Purpose

The purpose of this manual is to ensure the optimal use and safe application of the roller for the following processes.

- Commissioning
- Operation
- Maintenance
- Repair

1.1.3 Overview of customer documentation

Please check that the delivery is complete and inform us within 14 days after purchase if the delivery is not complete. Please always indicate the serial number.

The customer documentation for the vibration roller and its components includes, among others, the following customer documents.

- Roller manual
- Spare parts catalog for roller
- Yanmar engine manual in English
- Yanmar engine manufacturer’s declaration

1.1.4  **Validity of the manual**

This manual is valid for the following rollers:
ARX 12, ARX 16, ARX 16 K, ARX 20

An assortment of optional equipment is available for the roller, which we can install as you wish. For this reason, some of the figures or descriptions in this manual could deviate from your roller.

1.1.5  **Storage of the manual**

Ammann Schweiz AG delivers every vibration roller with this manual. The manual is a permanent component of the roller. Store it so that it is always available for viewing by the users.

Ensure that the manual is complete and legible. If the manual should become lost, damaged or illegible, replace it promptly.

The obligation to properly store the manual for the roller covers the roller's entire service life. If you loan the roller, ensure that the manual is taken along on board the roller. If the roller is sold, hand the manual over to the new owner.

1.1.6  **Technical changes**

In the interest of technical developments, Ammann Schweiz AG reserves the right to make changes to this customer document at any time without separate notice.

1.1.7  **Copyrights**

The publisher of this EC compliant customer document is Ammann Schweiz AG.

We reserve all rights for this document and the roller described therein. Reproduction, disclosure to third parties or utilization of its content is forbidden without our express permission. © 2011 Ammann Schweiz AG

1.1.8  **Spare parts**

In this manual, we describe selected maintenance work. We refer you to your authorized dealer for the remaining maintenance work in accordance with the maintenance plan.
When performing scheduled and unscheduled repairs, you may need to replace components of the roller.

Only use spare parts which meet the requirements specified by the Amman Schweiz AG. These requirement are fulfilled if only original Ammann spare parts are used.

For the ordering of spare parts, we provide you with a spare parts catalog.

1.2 Structure of the manual

The following explanations are designed to familiarize you with the roller and to provide support for handling and maintenance.

It is essential that you read chapter 3 Safety information, Page 27 carefully before commissioning and carrying out maintenance work.

Observing the "safety instructions" in particular increases the reliability of the roller in operation and its service life. This reduces repair costs and down time.

1.2.1 Orientation on the roller

When describing the components of the roller, we inform you of their position on the roller. We adhere to the orientation below when doing so.

![Figure 1-1 Orientation ARX 1](image)

We view the roller from the position of the driver in the driver’s position in the direction of travel.

1.2.2 Warnings

Please observe the meaning of the following warnings:
• **DANGER** represents an immediate hazard leading to severe bodily injury or death.

• **WARNING** represents a possibly hazardous situation which could lead to severe bodily injury or to death.

• **CAUTION** represents a possibly hazardous situation which could lead to slight bodily injury.

• Caution also represents a hazard of environmental pollution causing local or global environmental damage.

---

**NOTE**

The battery poles and terminals must be clean. If they are coated with a (whitish or greenish) sulfur crust they must be cleaned.

---

**NOTE**

Risk of cable fire or short circuit

• **NOTE** represents first of all: damage which could be caused to the roller or parts of it.

• **NOTE** represents secondly: application tips and other particularly useful information.

• **NOTE** is not a signal word for a hazardous or damaging situation.
Product description
2.1 Identification of the roller

2.1.1 Machine types

The data given below serve to identify the models. The machine models differ only in terms of weight and the width of the roller drum. The combined roller has a pneumatic wheel axis instead of the smooth back drum roller.

2.3 Roller designation

2.3.1 Identification plate

An identification plate is affixed to the roller for identification. The identification plate is attached to the rear part of the chassis below the steering column.

![Identification plate diagram]

10. CECE front axle weight (max. axle weight in Switzerland)
11. CECE rear axle weight (max. axle weight in Switzerland)

**NOTE**

When ordering spare parts you must indicate the serial number (S/N) of the roller.
2.4 Intended use

2.4.1 Intended purpose of the ARX 1

ARX 1 vibration rollers are universal rollers designed for use on small and medium-sized building sites.

Normal modes of operation

Use the ARX 1 roller exclusively for driving on and compacting:
- Unbonded layers (earth, gravel, crushed stone).
- Blacktops (asphalt).

Special operating modes

- Transport of the roller from A to B (crane and low loader).
- Cleaning the roller.
- Maintenance of roller according to maintenance plan or in the event of defects.
- Rectification of machine faults by trained personnel based on error messages.
- Towing the roller.
- Proper disposal by the operator in accordance with national regulations.

2.4.2 Requirements for the roller driver

Only trained, suitable and reliable specialists with a valid national driving license for this category of vehicle may operate the rollers.

2.4.3 Application limits

Tab. 2-6 Limits for application in consideration of environmental conditions

2.5 Inappropriate use

Inappropriate use includes any use not listed under intended use. Note the following in particularly:
- The roller is not a playground.
- The roller must not be used for traction.
- The roller is not a passenger transporter.
● In the case of movements greater than 3km, the roller must be loaded on a trans-porter.
● The roller is not a rock crusher, breaking chisel or similar.

2.5.1 **Disclaimer**

Ammann Schweiz AG accepts no liability for maintenance of reliable functioning of the roller if it is not used appropriately.

Unauthorized conversions and changes to the roller are prohibited for safety reasons and void any and every Ammann guarantee as well as, possibly, the CE directive.

Replaced spare or wear parts must meet the technical requirements specified by Ammann. These requirement are fulfilled if only original Ammann spare parts are used.

The instructions given in the various sections must be adhered to. The safety instructions must be observed at all times. Failure to adhere to working instructions, their correct order, safety instructions or safety labeling requirements causes liability claims to become void.
3

Safety information
3.1 General work safety

- The roller may only be used for driving and compacting unbound layers (gravel, soil) and blacktops (asphalt). Other uses are prohibited.
- Rollers may only be operated with all safety devices. Manipulation or disregard of safety devices and regulations invalidates the CE conformity.
- Before starting every shift, check the effectiveness of the operation and safety devices and that the protection devices are in place.
- Check the steering and brakes when you start work. If defects are apparent roller operation is not permitted.
- If you identify any defects on the safety system or defects that impair safe operation of the equipment, inform your supervisor immediately. The roller may no longer be operated.
- If you identify any defects which endanger safe operation, cease operation immediately.
- Only perform work on and clean the roller if it is stationary and secured from rolling away.
- Switch off the engine when filling the fuel tank. Do not fill up fuel in closed rooms. No open flames.
- Do not vibrate on slopes or inclines where there is a hazard of slipping or overturning.
- Do not drive on slopes that are steeper than the maximum climbing capacity of the equipment. Always drive the roller carefully perpendicular to the slope dip.
- Do not vibrate inside buildings and on unstable ground.
- Keep the driver’s position and steps free of trips, grease, dirt, ice, etc.
- The driving and working field of view may not be obstructed in any way. Adjust all the necessary mirrors correctly and keep them clean.
- Switch off the engine before leaving the roller. Secure the roller from unauthorized start-up and rolling away.
- Take suitable measure to secure lowered rollers that pose an obstruction.
- Never work under the influence of drugs, alcohol or medicines that impair consciousness.
- Only operate the roller in good general light conditions and good workspace illumination.
- The operator’s workplace is on the seat of the driver’s platform. The roller may not be operated from any other position.

3.2 Roller operation

⚠️ DANGER

Rollover hazard when driving the roller!

- Only start the roller from the driver’s position.
- No persons may stand in front of or behind the roller while it is in operation.
- Persons necessary for operations at the sides of the equipment must remain at a safe distance of at least 1 m.
3.2.1 Shear points

- When closing the hood ensure that no objects are situated between the hood and the chassis.
- Take care that nothing is jammed in the joint plates when rotating the roller drums.
- Do not put hands between the roller drum and support during operation.

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
</table>

**Danger to life through tipping or slipping of the roller! The edges of filled areas may give way!**

- Only travel directly up or down slopes.
- Do not drive across slopes.
- Keep your distance to embankments and edges!
- Do not drive over steps on roadways!
- Park the roller on slopes only in such a way that it cannot tip over.
- Use the roller on slopes only in such a way that it cannot tip over.
- The roller drums have very poor adhesion on snow and ice. Driving or working on a slope in snow or ice is prohibited.

**Fig. 3-1 Tipping hazard!**

Construction site conditions can have a negative effect on stability and the tipping angle (e.g. height of the curb, dynamic influences).
3.3 Rollover bar (ROPS)

**DANGER**

Danger to life through being thrown out!

- Always wear the safety belt. Together with the rollover bar it is a safety system that can save your life.

**Keep the following hazards in mind:**

- Plane surfaces are not always uniformly load-bearing.
- Cavities or large stones may be located below the surface.
- Loamy/clayey soils become slippery when wet.
- Vibration can increase the hazard of lateral slipping.
- High steering angles at slope edges increase the hazard of overturning.
- Articulated machines are in particular danger from high steering angles on slopes.

**DANGER**

Crushing of toes through careless handling of the roller!

- Wear safety shoes when working with the roller in order to help avoid crushed toes.

**DANGER**

Danger of accident through improper operation of the roller!

- Read the operating instructions before operating the roller.
- Adhere to the safety regulations at all costs.
- In case of lack of clarity, contact your authorized dealer.

**DANGER**

Danger to life through overturning of the roller!

- Never operate the roller with the ROPS folded down!
NOTE Check that:

- The roller chassis is not bent or cracked in the area of the ROPS mounting.
- The ROPS has no cracks or fractures.
- All screw connections are tight (note tightening torque).

3.4 Noise levels

WARNING

Hearing damage due to continuous noise level!

Depending on the use of equipment it is possible that the allowed noise level of 85dB (A) will be exceeded.

- Wear ear protectors in accordance with national accident prevention regulations when working at higher noise levels.

The following noise level measurements were carried out by an accredited testing and monitoring body in accordance with machine directive 2000/14/EEC of the European parliament and council.

Inspecting and monitoring organization: TÜV Österreich (Austrian technical inspectorate) Testing body no. 0408
### 3.5 Safety labels on the machine

- Observe and adhere to the rules.
- Keep the safety stickers and signs complete and legible.
- Replace any damaged or illegible stickers and signs immediately.
- You can order new stickers from Ammann Schweiz AG.

From the moment the signs are no longer recognizable and understandable at first glance, the machine must be shut down until new signs are installed.

#### 3.5.1 Warning stickers

<table>
<thead>
<tr>
<th>Warning stickers</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Park Brake" /></td>
<td>Relationship to roller: Operating lever console. <strong>Danger:</strong> Rollover hazard! <strong>Explanation:</strong> Always set the parking brake when leaving the vehicle.</td>
</tr>
<tr>
<td><img src="image" alt="On Guard" /></td>
<td>Relationship to roller: Driver's position. <strong>Danger:</strong> Danger of injury due to incompetent operation. <strong>Explanation:</strong> Read the operating instructions before operating the roller. Adhere to the safety regulations at all costs. Contact your authorized dealer if anything is unclear.</td>
</tr>
</tbody>
</table>

### Tab. 3-1 ARX 1 sound power level

<table>
<thead>
<tr>
<th>Model</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Measured sound power level</td>
<td>ARX 1 = 99 dB (A)</td>
</tr>
<tr>
<td>Guaranteed sound power level</td>
<td>ARX 1 = 103 dB (A)</td>
</tr>
<tr>
<td>Measured sound pressure level at the driver's position</td>
<td>ARX 1 = 86.6 dB (A)</td>
</tr>
</tbody>
</table>

**NOTE**

The obligation to wear ear protection is standardized nationally. In Switzerland and Germany, this is as of a measured level of 85 dB (A) (sound pressure).
<table>
<thead>
<tr>
<th>Warning stickers</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Image" /></td>
<td><strong>Relationship to roller:</strong> Between the front and rear parts of the roller. <strong>Danger:</strong> Crushing hazard! <strong>Explanation:</strong> Only stand in this area when necessary and only with extreme caution!</td>
</tr>
<tr>
<td><img src="image2" alt="Image" /></td>
<td><strong>Relationship to roller:</strong> Radiator, both sides. <strong>Danger:</strong> Hand injury! <strong>Explanation:</strong> Do not put hands in the radiator fan when the machine is running.</td>
</tr>
<tr>
<td><img src="image3" alt="Image" /></td>
<td><strong>Relationship to roller:</strong> Rollover bar (ROPS). <strong>Danger:</strong> Crushing hazard! <strong>Explanation:</strong> Never operate the roller with the ROPS folded down.</td>
</tr>

<td>Warning stickers</td>
<td>Meaning</td>
</tr>
<tr>
<td>------------------</td>
<td>---------</td>
</tr>
</tbody>
</table>
| ![Image](image1.png) | **Relationship to roller:**  
  Brake.  
  **Danger:**  
  Wear of the locking brake.  
  **Explanation:**  
  Only operate the parking brake when at a standstill. Only operate the emergency stop when at a standstill or in an emergency. After several operations of the locking brake while the roller is in motion, the brake test must be performed. |
| ![Image](image2.png) | **Relationship to roller:**  
  Safety belt  
  **Danger:**  
  Risk of accident due to the roller tipping over  
  **Explanation:**  
  Put on the safety belts before beginning operation of the roller.  
  There is an increased risk of tipping when driving in the proximity of edges (e.g. curbstone edges, shoulders, ditches, potholes) and when driving over edges. |
| ![Image](image3.png) | **Relationship to roller:**  
  Driver's position.  
  **Danger:**  
  Damage to electrical controls!  
  **Explanation:**  
  Never spray the water jet into electrical or electronic components.  
  Never spray into the engine combustion air intake. |
| ![Image](image4.png) | **Relationship to roller:**  
  Driver's position and immediate vicinity of the roller.  
  **Requirement:**  
  Wear ear protectors!  
  **Explanation:**  
  Wear ear protectors in accordance with national accident prevention regulations when working at higher noise levels. |
### 3.5.2 Notice stickers

**Explanation:** Filler neck for diesel fuel. |
3.6 Vibration hazard

3.6.1 Whole-body vibrations

The acceleration data given below for the three directions were measured in accordance with Directive 2002/44/EC of the European Parliament and Council. According to this directive the following shall be taken into consideration for risk assessment:

- Extent, type and duration of exposition as well as limit values.
- All impacts on the health and safety of the roller driver.
- Information provided by the roller manufacturer.

The following represent typical ground compaction activities with and without vibration. The impact duration shall be taken into consideration when calculating the daily exposition.

*Tab. 3-4 ARX 1 acceleration data in m/s² according to ISO 2631-1 for whole-body vibration*

Operating and display elements
5.1 Instrument panel

5.1.1 Switch functions

1. Operating switch for revolving warning light (option) and work light (option)
2. Horn
3. Operating switch for light
4. Operating switch for work gear / transport gear
5. Sprinkling interval switch
6. Indicator switch left / right (optional)
7. Operating switch for hazard flasher (optional)
8. Selector switch - vibration front or front and rear
9. Operating switch for vibration automation
10. Emergency stop
5.1.2 Control lamps

The warning lamps for engine oil pressure, charge indicator and brake release/supply pressure must light up when the ignition is switched on. They must go off as soon as the engine is started.

1 Control lamp error
2 Control lamp for battery charge level (charge control)
3 Engine oil pressure control lamp
4 Control lamp for engine coolant temperature
5 Control lamp for hydraulic oil temperature
6 Control lamp for emergency stop
7 Control lamp for diesel reserve
8 Control lamp for pre-heating
9 Brake pressure control lamp
10 Control lamp for parking light
11 Control lamp, dipped lights
12 Indicator control lamp
13 Fuel tank display
14 Operating hours counter
15 Battery voltage
16 Fault codes

The warning lamps for engine oil pressure, charge indicator and brake release/supply pressure must light up when the ignition is switched on. They must go off as soon as the engine is started.
5.1.3 **Control lamp functions**

**Error**

The **Error control lamp** lights as soon as the controller recognizes an error. At the same time, an error code will be shown on the display.

1. Check the machine based on the error code table.

If, after carrying out these checks, the battery charging lamp is still lit, call a specialist.

**Battery**

If the **battery charge level control lamp** lights up during operation or does not go off after starting, carry out the following check immediately.

1. Stop the engine.
2. Check the engine for defective or loose V-belt.

If, after carrying out these checks, the battery charging lamp is still lit, call a specialist.

**Engine oil pressure**

If the **engine oil pressure control lamp** lights up during operation or does not go off after starting, stop the roller and turn off the engine immediately!

1. Check the engine for oil loss and correct oil level.
2. The oil level in the engine is correct: Call a specialist to remedy the problem.

**Coolant temperature**

NOTE **Danger of engine overheating. Stop immediately!**

If the **coolant temperature control lamp** lights up during operation of the machine, switch off the engine immediately and top up coolant!

1. Allow the engine to cool down.
2. Remove the radiator cap.
3. In order to avoid scalding, first unscrew the radiator cap one turn and allow the pressure to drop.
4. As soon as the pressure has dropped, remove the cap and top up the liquid.
5. Check the cooling system for leaks and the radiator/expansion vessel for correct coolant level.
6. You are unable to find an error: Call a specialist to remedy the problem.

**WARNING**

Danger of scalding! The cooling circuit is pressurized.
Hydraulic oil temperature

The Hydraulic oil temperature control lamp lights as soon as the oil temperature exceeds 85°C. As soon as the temperature exceeds 95°C, error F32 appears as well. In this condition, the machine can only be driven at 1 km/h and the vibration can no longer be switched on. The machine may only be driven normally again after the temperature has gone below 95°C.

1. Check the function of the hydraulic oil radiator fan.
2. Clean heavy soiling from the radiator body.

Emergency stop

If the emergency-stop control lamp lights up while the ignition is on, observe the following:

1. Release the Emergency Stop button by turning it clockwise (red mushroom button on the instrument panel).
2. Put the operating lever into neutral position.
3. Sit on the driver’s seat.
4*. If the control lamp still continues to be lit: Call a specialist to remedy the problem.

Diesel reserve

After the Diesel reserve control lamp lights up for the first time, the fuel in the tank will last at least ½h.

1. Top up diesel fuel.

The tank holds 43 liters of diesel fuel.

Pre-heating

The pre-heating time amounts to about 15 sec. When the motor is started, the Pre-heating control lamp goes off.

Brake pressure

As long as the control lamp for brake pressure is lit, the brake release and supply pressure of the hydraulic system is not sufficient. As long as this control lamp is lit, the machine cannot be driven.

1. Check whether the seat contact switch is closed.
2. Check whether errors are displayed.
3*. The seat contact switch is closed and the control lamp is still lit: Call a specialist to remedy the problem.

Parking light

The Parking light control lamp remains lit as long as the parking lights are switched on.
**Dipped lights**

The *Dipped lights control lamp* remains lit as long as the dipped lights are switched on.

---

**Indicators**

The *Indicator control lamp* remains lit as long as the blinker is switched on.
5.2 **Error code**

The current operating state and the errors recognized by the controller are displayed above the hour counter.

5.2.1 **Display upon start-up**

If the machine is not in operation, e.g. the seat contact is not closed, the issue preventing start-up will be displayed:

*Tab. 5-1 Error code upon start-up*

<table>
<thead>
<tr>
<th>Display</th>
<th>Error</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>-11</td>
<td>Seat contact open</td>
<td>Sit down</td>
</tr>
<tr>
<td>-12</td>

<tr>
<td>-14</td>
<td>Parking brake is activated</td>
<td>Release parking brake</td>
</tr>
<tr>
<td>-15</td>
<td>Diesel engine is not running</td>
<td>Start the engine</td>
</tr>
</tbody>
</table>

**NOTE**

The display remains blank when the machine is in operation, in other words, when it is being driven and/or is vibrating.

If errors are recognized, the error warning lamp lights in addition to the display of the error code. If more than one error is present, they will be displayed one after the other at an interval of about 5 sec.

5.2.2 **Displays during operation**

**NOTE**  Depending on the respective error, you must turn the ignition off and then on again before once again beginning operation of the roller.
Commissioning
6.1 Commissioning

NOTE Familiarize yourself with the manual before commissioning.

In order to begin operating the roller (driving), the following conditions must be fulfilled:

- Joint protection is opened.
- Motor is started.
- Seat contact is closed.
- Operating lever is in the neutral position.
- Parking brake is not activated.

In order to be able to activate the vibration, the work gear must also be activated.

6.1.1 Roller with pneumatic wheel (combined roller)

- If using a combined roller, you must check tire pressure and adjust as required. The ex works pressure is set to 2.5 bar.
- Tire pressure must be adjusted to suit the compaction condition of the ground:

NOTE The tires must be replaced if the fabric is visible on the tire surface.
7

Operation
7.1 Rollover bar (ROPS)

7.1.1 Folding the ROPS upward

1. Remove the split pin.
2. Remove the bolt.
   2.1 Place the parts on the rear water tank or on the seat. They should be easy to reach when you come to refit them.
3. Lift the ROPS until it remains upright alone.
4. Pull the ROPS all the way up.
   4.1 To do so, stand on the driver’s position.
5. Fit the two bolts.
   5.1 You may need to use a pipe extension to help in tightening the bolts.
   5.2 Lubricate the bolts (e.g. Never Seez mounting grease).
6. Place the split pins into the bolts.

Fig. 7-1 ROPS down / ROPS up

Tab. 7-1 Torque: Threaded bolt for ROPS joint

<table>
<thead>
<tr>
<th>Bolt diameter</th>
<th>Steel quality</th>
<th>Tightening torque in Nm</th>
</tr>
</thead>
<tbody>
<tr>
<td>M18</td>
<td>S355</td>
<td>147 Nm (30 kg on 50 cm lever)</td>
</tr>
</tbody>
</table>

NOTE Both sides must be secured with bolts and split pins during operation.
7.2 Driver’s seat

7.2.1 Safety information

**WARNING**
Danger of accident due to unsecured ROPS!
The ROPS can fall as soon as it crosses its center of gravity.

- Never stand below the ROPS when lowering.

**DANGER**
Danger to life through distraction!

- Never adjust the driver’s seat while driving, as you will lose control of the roller.

**DANGER**
Danger to life through being thrown out!

- Always wear the safety belt. Together with the rollover bar the safety belt is a safety system that can save your life.

**DANGER**
There is a risk of crushing when the roller moves out to the sides.

- Never place your feet on the bend of the floor panel.
7.2.2 Adjusting the driver's seat

NOTE The driver's seat is important for your health. Adjust the seat to suit your body size.

Fig. 7-3 Driver's seat

1 Backrest
2 Weight
3 Forward/backward adjustment
1 Move the lever upward or downward.

The tension of the suspension can be adjusted to suit the weight of the driver.

1 Turn the adjusting knob:
   2a **Toward right**: The spring tension of the seat will be reduced.
   2b **Toward left**: The spring tension of the seat will be increased.

Weight adjustment is infinite in the range of 50 - 120kg.

1 Pull the lever slightly upward.
   1.1 Place the seat in the desired position.

**NOTE**

If adjusted ergonomically forward/backward, your feet will be on the floor panel.

### 7.3 Protection against vandalism

Always fold the vandalism protection cover upward before start-up of the roller.

The vandalism protection cover protects the instrument panel from:

- the effects of weathering
- vandalism
- alterations by third parties

If you wish to secure the instrument panel from unauthorized access by third parties, you can install a padlock on the loop provided for this purpose.

Commercially available padlocks can be obtained in any building supplies store.
7.4 Starting the engine

</tbody>
</table>

- PARK: In this position you can switch on the parking light. The remaining electrical loads are off.
- Off: All electrical loads are off.
- Ignition on: All electrical consumers can be switched on.
- Pre-heating: All electrical consumers can be switched on.
- Start: All electrical consumers can be switched on.

7.4.2 Starting the engine

1. Fold the vandalism protection cover all the way back.
2. Move the operating lever into the neutral position until it locks in.
3. Put the speed adjusting lever into the idle position.
4. Turn the ignition key clockwise to position III.
5* As soon as the engine starts up release the ignition key.

Fig. 7-5 Starting motor / position of operating lever and speed adjusting lever
NOTE  The control lamps for engine oil pressure, charging, hydraulic brake release/supply pressure light up when the ignition is switched on. They extinguish once the engine is running.

Pre-heating

If the outside temperature is below 0°C:

1  Turn the ignition key to position II

   1.1 hold it in this position for 15 sec.

2  Turn the ignition key further to position III.

NOTE  When starting and driving the roller from cold, with cold hydraulic oil, braking distances are longer than when the oil has reached normal working temperature.

7.5  Driving and braking

7.5.1  Setting the operating speed (vibration frequency)

Speed adjusting lever  The roller has two operating speeds. This allows improved adaptation of speed and vibration power to specific ground conditions

1a  Idling speed: Move the speed adjusting lever downward.

1b  Low speed: Put the speed adjusting lever into position I (85%).

1c  High speed: Put the speed adjusting lever into position II (100%).

2  Check whether the steering is working.

The speed influences the vibration frequency:

Low speed:

- low frequency
- 85% of the vibration capacity
- 85% of the driving speed
  (depending on the operating/transportation gear pre-select switch)
- 85% of the diesel engine speed

High speed:

- high frequency
- 100% of the vibration capacity
- 100% of the driving speed
  (depending on the operating/transportation gear pre-select switch)
- 100% of the diesel engine speed
7.5.2 Driving

Driving forwards

1 Push the operating lever forward slowly.

The roller moves forward.

Slowly pull the operating lever into neutral position.

The roller is automatically hydrostatically braked.

Driving backward

1 Pull the operating lever back slowly.

The roller moves backward.

Slowly pull the operating lever into the neutral position.

The roller is automatically hydrostatically braked.

NOTE If the operating lever is released it does not automatically return to the neutral position. The lever remains at its current position.

NOTE If the operating lever is jerked over the neutral position, e.g. as a result of an emergency situation, the machine will stop.
7.6 Work gear / transport gear

The roller is equipped with two gears.

1. Turn the switch:

2a. toward the left: the hydraulic system is switched to the "transport gear" drive position. The vibration cannot be switched on now. The roller drives at a high speed.

2b. toward the right: the hydraulic system is switched to the "work gear" drive position. The vibration can now be switched on as well. The roller drives at a low speed.

7.7 Turning off the engine

1. Put the operating lever into neutral position.
   The roller is automatically hydrostatically braked.

2. Move the speed adjusting lever downward into the idle position.

3. Turn the ignition key:

4a. to position 0: The engine stops.

4b. to position P: The parking lights will be switched on.

**NOTE** The hazard warning light can be switched on and off independently of the ignition key position.

7.8 Parking brake

Parking brake

All rollers are equipped with a parking brake switch. This switch activates the parking brake compulsorily. In this condition, the roller neither be moved nor can the vibration be activated. This function can be used to prevent the roller from slowly rolling on slopes.

The driver must activate the parking brake when leaving the roller.

**NOTE** Increased parking brake wear.

- The parking brake may not be activated while driving, but only when the roller is at a standstill.

7.9 Seat switch

The roller can only be put into operation when the seat switch is closed, i.e. the driver is seated on the driver’s seat.
7.9.1 Opening the seat switch

If the seat switch is opened during operation (the driver stands up), the roller will stop after a brief delay of 0.7 sec.

**NOTE**
The seat switch can be opened when:

- the driver leans out to the side and no longer sits on the seat with his full weight.
- the driver is too light. In this case, adjust the seat for the driver using the weight adjustment.

7.9.2 Closing the seat switch

1. Put the operating lever into the neutral position.
   1.1 You can leave the speed adjusting lever in its previous position.

2. Start the roller by moving the operating lever.

**NOTE**
If the driver sits down again within the delay period, the roller continues to drive normally.

7.10 Emergency stop

If you get into an emergency situation requiring an immediate standstill of the roller, then press the emergency stop on the instrument panel.

7.10.1 Initiating an emergency stop

**Emergency stop**

1. Press the emergency-stop button.

The roller comes to a standstill immediately. The engine shuts down immediately and automatically. The brakes are activated.

**NOTE**
Only press the emergency stop in an emergency.

7.10.2 Releasing the emergency stop

1. Put the operating lever into the neutral position.

2. Move the speed adjusting lever all the way back.

3. Now turn the emergency stop button slightly in the direction of the arrow until its clicks out.
The roller is now ready for operation.

**NOTE**

Release the emergency stop button by pulling upwards in the "pull-push" version. The direction arrows are missing from this button.

### 7.11 Locking brake

The vibration roller is equipped with an automatic locking brake.

The brakes for the drive motors work:

- When the supply pressure falls below 12 bar.
- When you activate the emergency-stop button.
  - When you press the Emergency Stop button a valve reduces supply pressure and the brakes take immediate effect.
- When you activate the parking brake.
  - When you activate the parking brake, a valve reduces the supply pressure and the brakes take immediate effect.

The locking brake closes automatically when the diesel engine is switched off.

**NOTE**

Brake wear due to unnecessary emergency stops!

- In order to save the brakes from unnecessary wear, only perform an emergency stop in emergency situations when driving.
- Only use the locking brake in special cases, e.g. when you stop on a slope. If the roller starts to roll, move the operating lever slightly in the opposite direction, so that the vehicle is kept still hydrostatically.

### 7.12 Sprinkling

#### 7.12.1 Checking water level

**Water level indicator**

1. You can read the water level on the water level indicator at the rear left:
   1a full: You can switch sprinkling on.
   1b empty: First refill with water.

#### 7.12.2 Refilling with water

1. Open the screw lid of the water tank at the rear right.
   1.1 Use the roller’s ignition key to unlock the tank screw lid.
2. Pour water in.
7.12.3 **Switching on continuous sprinkling**

**On the instrument panel**
1 Turn the sprinkler switch from **Pos. 0** to **Pos. 1**.

The sprinkler switches on.

**On the operating lever**
1 Press the bottom button (1).

The sprinkler stays on as long as you are pressing the button.

**NOTE**
In the combined roller, operating lever sprinkling is used only for tire sprinkling.

7.12.4 **Switch on interval sprinkling**

1 Turn the sprinkler switch from **Pos. 0** to **Pos. 1**.

The sprinkler switches on.

2 Turn the switch further to the right.

The interval sprinkler switches on.

3* Interval times: Turn the switch continuously toward the right to adjust the sprinkling intervals infinitely.
7.13 Simple/double vibration

**WARNING**
Danger to life through slipping or caving in of the roller!
- Do not use vibration on steep embankments or at steep angles!
- Do not vibrate inside buildings and on unstable ground!

**NOTE**
Damage to material due to harsh vibration movement.
- Never use vibration while idling!
- Never use vibration while at a standstill!
- Only switch vibration on if the speed adjusting lever is set to an operating speed.

7.13.1 Vibration on / off

**Presetting**
1 Turn the switch:
2a toward left: The roller only vibrates at the front.
2b toward right: The roller vibrates both at the front and the rear.

**NOTE**
When switching from double to single vibration, there is a brief interruption of the vibration.

**Switching on / off**
1 Press the top button briefly on the operating lever (1).
   Vibration switches on.
2 Press the top button again on the operating lever (1).
   Vibration switches off.

7.14 Vibration automation

In automatic mode vibration is switched on at speeds greater than 1-2 km/h and off at speeds less than 1-2 km/h.
Vibration is not possible with the roller at a standstill.

**WARNING**

Unintentional reaction / accident hazard

- If the vibration automation pre-select switch is set to automatic and vibration is activated, the roller begins to vibrate as soon as the operating lever is pushed forwards. If the driver is surprised by this reaction an uncontrolled and hazardous action may result.

### 7.14.1 Manual vibration

1. Set the pre-select switch to the "Manual" position 📣.
2. Press the vibration button (upper button) on the operating lever.

The roller vibrates.

### 7.14.2 Automatic vibration

1. Set the pre-select switch to the "Auto" position 📣.

The roller vibrates as soon as vibration is activated and the roller reaches a speed of 1-2 km/h.

The minimum speed can be changed if desired. Ask your authorized dealer.
Options
8.1 Edge cutter

**DANGER**

Risk of injury when lowering cutting disk or pressure disk

- Keep personnel out of the hazard zone when raising and lowering the edge cutter. Keep to a safety distance of at least 1 m.

![Fig. 8-1 Edge cutter / Multifunction operating lever](image)

1. Raising/lowering the edge cutter
2. Roller drum sprinkler
3. Edge cutter water
4. Vibration on/off

8.1.1 Presetting edge cutter

**Vibration**

1. Before operating the edge cutter, set the pre-select switch to “front vibration”.

**NOTE**

The edge cutter only operates correctly in this setting. If the pre-select is set incorrectly, it will malfunction (vibration will be switched on, pavement will be damaged).

8.1.2 Operation of the edge cutter

**Raise/Lower**

1. Operation of the rocker switch (1):

2a. **Lower**: As long as you press this switch right, the edge cutter is lowered.

2b. **Raise**: As long as you press this switch left, the edge cutter is raised.
### Sprinkling

1. Press the "Sprinkler" (2) button. The roller drum sprinkler is switched on for as long as the "Sprinkler" button is pressed.

### Water supply

1. Pressing the "Water" (3) button switches on the water supply for the edge cutter.

**NOTE**
The water supply only works if continuous roller drum sprinkling is switched on.

### Vibration

1. Press the "Vibration" (4) button.

The vibration switches on.

**NOTE**
When the vibration is switched on, the edge cutter is raised automatically. The edge cutter is nonfunctional.

### 8.1.3 Disks

A cutting disk and a pressure disk are included in the edge cutter's scope of delivery.

**Cutting disk**

Using the cutting disk (1) the pavement can be cut at the required position or pavement edges can be straightened.

**Pressure disk**

The pavement edges are compacted at an angle using the pressure disk (2).

![Fig. 8-2 Cutting disk and pressure disk in use](image)

### Storage

If one of the two disks is not being used, fix it to the mounting provided on the left side of the roller.
8.2 2 operating levers

It is only possible to drive with one operating lever. The unused operating lever must be in the neutral position.

The operating buttons are always active.

Driving with the left operating lever
1  Move the right operating lever to the neutral position.
2  Driving with the left operating lever

Driving with the right operating lever
1  Move the left operating lever to the neutral position.
2  Driving with the right operating lever

8.3 Rear work light and revolving warning light

Switching the work light and the revolving warning light on and off:
1  Turn the switch:
2a to position 0: Both the work light and the revolving warning light are switched off.
2b to position 1: The rear revolving warning light is switched on. 🌟

WARNING
Risk of injury!
The disk can loosen and injure nearby persons!

- Check the fastening screws when replacing the disks. Tighten the screws well on both the edge cutter and the mounting. See table 9.17, Tightening torque.
2c To position 2: Both the rear work light and the revolving warning light are switched on.

NOTE
If the roller is no longer fitted with a revolving warning light, only the work light is lit.

8.4 Revolving warning light

8.4.1 Switching on the revolving warning light

1 Turn the switch:
2a To position 1: The revolving warning light is switched on.

The roller may be fitted with a revolving warning light, but the corresponding switch may be missing. In this case the revolving warning light operates continuously as soon as the ignition key is in position II.

8.4.2 Positions of the revolving warning light

in operation The revolving warning light is located at the rear on the rollover bar (ROPS) during operation.

not in operation Fold the rollover protection (ROPS) down for transport or during extended periods of non-use.

1 Move the driver’s seat to the center.
2 Fasten the revolving warning light to the mounting on the inner left side of the rollover bar (ROPS).

Secure the parking brake firmly.

Fig. 8-4 Revolving warning light in operation / not in operation
8.4.3 *Replacing the bulb*

1. Unscrew the theft-protection screw (1).
2. Lift the cover off with a twisting motion toward the right (2).
3. Press the two lugs of the bulb holder (3) together.
4. Remove the bulb from the holder.
5. Pull the bulb out of the connector.
6. Replace the defective bulb with a new one of the same type and wattage.

*Fig. 8-5 Replacing the bulb*

**NOTE**

Do not touch the glass of the new bulb with your fingers. Sweat on your hands can burn into the glass and reduce bulb lifetime.

8.5 *Roof*

The roof option serves as all-weather protection. You can use the roof to protect from sun and rain.

8.5.1 *Transport with ROPS folded down*

During transport with the ROPS folded down, e.g. in a container or closed truck, you must remove the whole roof.

8.5.2 *Fitting / removing the roof*

Please note the work/assembly instructions contained in the delivery: (ANW-4397 roof option).

*Fitting the roof*

1. Screw the roof to the ROPS with the four Allen screws and washers.
   1.1 Make sure that the screws are always firmly tightened.
Roof with revolving warning light

1. Loosen the wing nuts of the revolving warning light.
2. Lift the warning light out of the holder.

8.5.3 Transport with ROPS folded up

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Material damage and hazard to road traffic</td>
</tr>
<tr>
<td>The pressure of the head wind can cause the material to tear or come off and endanger traffic coming from behind.</td>
</tr>
<tr>
<td>• You must remove the tarpaulin during transport on an open truck.</td>
</tr>
</tbody>
</table>

8.5.4 Removing the tarpaulin

1. Detach the hook-and-pile fastener on the sides and the leather straps in the corners.
2. Remove the tarpaulin.

![Fig. 8-6 Removing the tarpaulin](image)

8.6 Reversing alarm

The reverse alarm is active as soon as the roller drives backward. The alarm stays on until the roller starts to drive forward or comes to a standstill.

97dB +/- 4dB to SAE J 994, Oct. 03

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rollover hazard when driving the roller!</td>
</tr>
<tr>
<td>• Get out of the danger zone immediately!</td>
</tr>
<tr>
<td>• No persons may stand in front of or behind the roller while it is in operation.</td>
</tr>
</tbody>
</table>
8.7 Battery cut-off switch

The battery cut-off switch interrupts the power supply from the battery to the roller. Switch off the battery cut-off switch if the roller is not in operation for longer than two days.

NOTE Always disconnect the power supply when working on the electrical system.

8.7.1 Switching battery cut-off switch on / off

The battery cut-off switch is located at the rear on the battery plate.

**Switching on the power**

1. Turn the red key of the battery cut-off switch left to horizontal position.

If fitted, the roller is now supplied by the starter battery.

**Fig. 8-7 Switching on the power**

**Switching off the power**

1. Turn the red key of the battery cut-off switch down to vertical position.

This interrupts the power supply.

**Fig. 8-8 Switching off the power**

**Removing the key**

1. Turn the red key of the battery cut-off switch right to final position.

2. Now you can remove the key.

3. Close the keyhole using the cap provided.
8.8 Anti-adhesive

Anti-adhesive is a water-soluble specialized liquid for combined rollers. The anti-adhesive ensures an effective separation between the pneumatic surfaces and the bitumen course.

The anti-adhesive tank filler neck is located on the left-hand side of the driver’s position under the cover in the footplate.

Anti-adhesive reservoir volume: 12.5l

8.8.1 Switching on anti-adhesive

1. Press the bottom button (1) on the operating lever.

Anti-adhesive is admixed until you release the button.

NOTE The water sprinkler for the roller drum is controlled via the instrument panel.
8.8.2 Advantages of anti-adhesive

- No tearing of the course thanks to the good separating effect.
- Extremely low anti-adhesive consumption.
- The course can be worked at higher temperatures.
- Lower shocking to the course due to lower water consumption.
- Anti-adhesive does not attack the pneumatic tire rubber.
- Penetration of superfluous anti-adhesive has no subsequent negative effects.
- The anti-adhesive is biodegradable.

8.8.3 Anti-adhesive designations

Maintenance
9.1 General safety instructions

Maintenance may only be carried out by trained personnel!

- Only perform maintenance and repair work on the roller if it is static and secured from rolling away.
- Secure the roller with the joint protection.
- Relieve pressure before working on the hydraulic pipes.
- Disconnect the battery before commencing work on the roller's electrical systems.
  - Cover the battery with isolating material or remove it completely. This does not apply to work requiring an electric current.
  - In the event of injuries caused by acid, rinse immediately with clean water and consult a doctor.
- Replace all protection devices properly after performing maintenance and repair work.

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger to life through an unsafe work area!</td>
</tr>
<tr>
<td>- Always use an accident-proof support when working on a raised roller.</td>
</tr>
<tr>
<td>- Never work below a roller which is only supported by a crane or other electrical / hydraulic lifting device.</td>
</tr>
<tr>
<td>- Only stand under a raised roller if it has been mechanically secured.</td>
</tr>
<tr>
<td>- Only use stable loading ramps suitable for the weight of the roller for loading.</td>
</tr>
<tr>
<td>- On transport vehicles, secure the roller from rolling off, slipping to the side and tipping over.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gas poisoning through letting engine run in enclosed spaces!</td>
</tr>
<tr>
<td>- Do not leave the engine running in closed areas.</td>
</tr>
<tr>
<td>- If use of the roller in a confined space cannot be avoided, the exhaust fumes must be extracted directly from the exhaust pipe.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger of scalding from hot water / steam!</td>
</tr>
<tr>
<td>- Never remove the expansion cap or radiator cap while the engine is running or hot!</td>
</tr>
<tr>
<td>- First loosen the cap to the first stop to release the pressure. Only then remove the cap.</td>
</tr>
</tbody>
</table>
NOTE Damage to electrical controls through contact with water!

- Never spray the water jet into electrical or electronic components.
- Never spray into the engine combustion air intake.

NOTE Damage to hydraulic controls through use of wrong oil!

Hydraulic tubes decompose.

- It is forbidden to change used rollers for use with biodegradable hydraulic oils!
- If hydraulic hoses on a roller running on synthetic ester HE need replacing, only those declared by the supplier as being compatible with synthetic esters may be used.

WARNING Danger of scalding from hot water / steam!

- Only work on a cool engine.
- Keep enough distance to the exhaust.

CAUTION Environmental hazard through operating materials!

- Do not allow any liquids get into drains, soil or the environment.

DANGER Danger of severe injury through loose clothing being caught and drawn in!

- Only open the engine hood when the engine is switched off.
- If trouble shooting makes working on moving parts (engine or roller) unavoidable, never wear: necklaces, bracelets, rings, scarves, ties or other loose items of clothing.
If any of these get caught in moving parts there is a danger of serious injury!
9.1.1 Battery safety instructions

**DANGER**
Risk of serious injury through leaking battery acid!

The sulfuric acid in the battery is poisonous and so strong it can burn holes in clothes and dissolve skin. If it gets into eyes it can lead to blindness.

- Protect the battery from fire, flames and sparks.
- Protect the battery from mechanical damage.

**DANGER**
Risk of explosion when charging battery!

- Never check the battery charge level with a metal object. Use a voltmeter or the battery's charge indicator.
- When disconnecting the battery always disconnect the negative terminal first (\(-\))
- Connect the positive terminal (\(+\)) first when reconnecting.

**NOTE**
Doing welding work on the roller when the battery in installed can damage the electrical controls!

- Always remove the battery completely before performing welding work on the roller.

**NOTE**
Always replace the battery with a service-free battery. If you are using a battery that requires maintenance, always observe the safety instructions in the battery manual.

9.2 General information about maintenance

**NOTE**
Not all maintenance tasks are listed in these operating and maintenance instructions. We would also like to point out the separate manual for the Yanmar engine.

- When carrying out maintenance work always observe the applicable safety regulations in the 3 Safety information, Page 27 section.
- Maintenance work and inspections must be performed according to the following maintenance tables in order to guarantee reliable roller operation.
- Remove all dirt before taking off any covers, plugs, measuring rods, etc. to inspect or top up engine oil, hydraulic oil, diesel or other liquids.
- Any parts that do not pass the following inspections must be replaced immediately.

The protective devices must be correctly refitted after every service.

9.5 Towing

Only tow the roller in an emergency in order to move the machine away from the danger zone.

**WARNING**

Risk of accident through improper towing!

Adhere to the following rules:

- Maximum towing speed: 1 km/h
- Maximum towing distance: 10 m
- Then transport the roller by truck or trailer.

1 Secure the roller with the joint protection.
   1.1 See Joint protection, Page 128.

**Towing**

1 Fasten a suitable chain, steel cable or anchor sling to the towing lugs.

2 Pull the machine out of the hazard zone.

**Lift**

1 Attach suitable equipment to the central lifting point to lift the roller out of the hazard zone.
   1.1 See Lifting at the 1-point lifting eye, Page 129
9.6 Opening the hood

## DANGER

Danger of severe injury through loose clothing being caught and drawn in!

- Only open the engine hood when the engine is switched off.
- If trouble shooting makes working on moving parts (engine or roller) unavoidable, **never** wear: Necklaces, bracelets, rings, scarves, ties or other loose items of clothing.
If any of these get caught in moving parts there is a danger of serious injury!

## WARNING

Danger of scalding from hot water / steam!

- Only work on a cool engine.
- Keep enough distance to the exhaust.

There is one locking device on the left and one on the right of the roller.

1. Open both catches, on the right and the left.
2. Open the hood with the handle on the left of the hood.
   
   2.1 Lift the hood with slight pressure toward the center of the roller.
   
   2.2* If the hood is defective, replace it immediately.

If you wish to secure the engine compartment from unauthorized access by third parties, you can install a padlock on the loops provided for this purpose.

Commercially available padlocks can be obtained in any building supplies store.

---

**NOTE**

Two gas absorbers reduce the force required to open the hood and give it its final position. If you need more force to open the hood, replace the gas absorbers. See Gas strut, Page 120.

9.7 Engine compartment overview
### 9.8 Fuel (diesel)

#### 9.8.1 Checking fuel level

*Diesel control lamp*

After the control lamp on the instrument panel lights up for the first time, the fuel in the tank will last at least ½ h.

#### 9.8.2 Refueling

1. Fill the fuel tank with diesel fuel up to the lower edge of the filler neck.

1a. Every day before beginning work, or

1b. as soon as the warning lamp lights up.

The tank holds 26 liters of diesel fuel.

*Fig. 9-4 Diesel fuel filler neck*
### 9.8.3 Draining fuel

**CAUTION**

Environmental hazard through operating materials!

- Do not allow any liquids get into drains, soil or the environment.

1. Unscrew the screw plug (1) under the roller using a square socket wrench (13 mm). (You can find this wrench on the ratchet of the socket wrench set.)

2. Place a container under the drain tap.

3. Drain off the diesel.

4. Install the screw plug (1).

   **4.1** Secure the screw connections with Loctite special and tighten by hand, not with torque. Observe the table *Torque: Drain cock / hydraulic tank*, Page 111.

### Diesel Specifications

Tab. 9-1 Excerpt from the Yanmar engine manual about diesel specifications

<table>
<thead>
<tr>
<th>Diesel specifications</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>No. 2-D, No.1-D, ASTM D975-94</td>
<td>USA</td>
</tr>
<tr>
<td>EN590:96</td>
<td>Europe</td>
</tr>
<tr>
<td>ISO 8217 DMX</td>
<td>International</td>
</tr>
<tr>
<td>BS 2869-A1 or A2</td>
<td>Great Britain</td>
</tr>
<tr>
<td>JIS K2204 grade no. 2</td>
<td>Japan</td>
</tr>
<tr>
<td>KSM-2610</td>
<td>Korea</td>
</tr>
<tr>
<td>GB252</td>
<td>China</td>
</tr>
</tbody>
</table>

**NOTE**

Poor quality diesel can:

- Reduce the performance of the engine
- Damage the engine

**NOTE**

For more detailed information, please see the Yanmar engine manual.
9.8.4 **Cleaning the fuel tank**

Over time, condensation water gathers in the fuel tank. It must be drained once a year.

1. Loosen the screw plug (1) beneath the roller using an open-ended wrench (size 27).
2. Place a container under the drain tap.
3. Allow about 1/2 liter of fluid to drain.

First, the water which has collected on the bottom of the tank will run out.

4. Install the screw plug (1).
   4.1 Secure the screw connections with Ergo 4207 and tighten by hand, not with torque. Observe the table *Torque: Drain cock / hydraulic tank*, Page 111

9.8.5 **Fuel filter element**

Replace fuel filter element (1) according to the maintenance plan.

1. Close stop cock (2).
   1.1 Move to OFF.
2 Unscrew the filter housing (3).
3 Remove the old filter element (1).
4 Insert new filter element (1).
5 Screw the filter housing (3) on.
6 Open stop cock (2).
   6.1 Move to ON.

9.8.6 Water separator filter element

![Water separator filter element](image)

Fig. 9-7 Water separator

Drain filter housing

If there is water in the filter housing, the housing must be drained at once.

1 Close stop cock (3).
   1.1 Move to OFF.
2 Unscrew filter housing and empty.
3 Screw the filter housing on.
4 Open stop cock (3).
   4.1 Move to ON.

Filter element clean

Clean water separator element (1) according to the maintenance plan.

1 Close stop cock (3).
   1.1 Move to OFF.
2 Unscrew the filter housing (2).
3 Clean filter element (1).
4 Screw the filter housing (2) on.
5 Open stop cock (3).
   5.1 Move to ON.
9.9 Engine oil

9.9.1 Checking the engine oil level

1 Check engine oil level daily using the dipstick. The dipstick (1) is located on the left of the engine.

1.1 Check oil level while the roller is standing on a level surface and the engine is cold.

1.2 You can see the engine oil level on the dipstick. The oil level must be between the top (x) and bottom (y) marks.

2* Top up engine oil as required.

Fig. 9-8 Location of dipstick

9.9.2 Topping up the engine oil

1 Top up the engine oil at one of the two oil filler necks.

1a Filler neck on the left-hand side of the engine.

1b Filler neck on the engine.

Fig. 9-9 Filler neck to the left and filler neck on top.
NOTE  
In order to guarantee operating safety of the engine for the long term, you must not put any additives in the engine oil.

9.9.3  
Draining engine oil

The engine oil drain is located at the front left, between the front and rear chassis.

1  
Turn the roller all the way to the right. This provides easier access to the engine oil drain (1).

![Fig. 9-10 Roller turned fully / Engine oil drain](image)

**CAUTION**

Environmental hazard through operating materials!

- Do not allow any liquids get into drains, soil or the environment.

2  
Place a container under the drain.

3  
Open the union by turning it anti-clockwise (27 mm wrench).

The oil starts to flow out immediately.
9.9.4 Replace the engine oil filter

Fig. 9-11 Engine oil filter

1  Loosen the filter (1) by hand or using a filter wrench.
   1.1 The oil starts to flow out immediately. It’s best to place a rag under it beforehand.
2  Replace oil filter (2).
3  Screw the complete filter back in place.

9.10 Hydraulic oil

9.10.1 Checking the hydraulic oil level

Inspection window

Always check the hydraulic oil level at operating temperature with the engine running.

1  Place the roller on level ground.
2  Let the roller continue to idle.
3  Check the oil level in the inspection window.
4* If oil level is in the lower third of the inspection window, top up through the filler neck with 1 liter of hydraulic oil.

9.10.2 Topping up hydraulic oil

1  Remove the screw lid on the filler neck (1).
2  Top up with 1 liter of hydraulic oil (2).
3  Reinstall the screw lid (3).
   3.1 Important: Always grease the O-ring before screwing it in place.
NOTE Observe the table of lubricants in chapter 9.15.

9.10.3 Draining the hydraulic oil

NOTE Only drain the hydraulic oil at operating temperature.

- The oil flows better.
- Residues in the tank will be flushed out with the oil.

1 Place a container (with at least a 30 liter capacity) under the hydraulic oil drain.
2 Remove the hydraulic oil tank lid.
3 Remove the hydraulic oil drain plug (1) under the roller.
4 Allow the oil to drain into the container.
5 Install the hydraulic oil drain plug (1).

5.1 Secure the screw connections with Loctite special and tighten by hand, not with torque. Observe the table Torque: Drain cock / hydraulic tank, Page 111

NOTE When you drain the hydraulic oil, please also replace the hydraulic oil filter. See chapter 9.10.5.

NOTE Tighten the screw connections in the hydraulic tank hand tight.
9.10.4  Cleaning the hydraulic oil cooler

1. Check the cooling ribs of the hydraulic oil cooler for dirt and clogging.
2. Clean the ribs with water or blow them out with compressed air.

---

NOTE
Never clean the cooler with high pressure (e.g. powerful water jet).

---

Fig. 9-14 Hydraulic oil cooler grill

9.10.5  Replacing the hydraulic oil filter

1. Remove the filter lid.
2. Unlock the filter element.
3. Lift the filter element out of the filter housing.
   3.1 Dispose of the filter element in an ecologically appropriate manner.
4. Place the new filter element in the proper position.
   4.1 Observe the position of the locking cam.
5. Turn the filter element fully clockwise to the stop.

---

Fig. 9-15 Replacing the hydraulic oil filter, steps 1 to 3
6 Lightly oil the sealing ring on the filter lid.

7 Put the filter lid in place.

7.1 Tighten the lid with a torque wrench (max. torque, 20Nm).

---

**9.10.6 Replacing the ventilation filter**

Replace the ventilation filter (1) according to the maintenance plan.
9.11 Emptying the water tank

9.11.1 Cleaning accessories

Clean the following parts as required:

- Water tank with filler strainer
- Water filter
- Sprinkler pipes with nozzles

9.11.2 Emptying the water tank

1. Unscrew the screw plug (1) of the water drain with a wrench (size 32).
2. Drain off the water.

![Water drain](image)

**Fig. 9-19 Water drain**

**NOTE** In the event of the risk of frost, additionally empty the sprinkler system. See Section Winterization (risk of freezing), Page 124

9.12 Coolant

A coolant antifreeze mixture for up to -25° is provided upon delivery from the factory. For temperatures colder than -25°, the fluid must be replaced by a suitable coolant antifreeze mixture.

9.12.1 Checking coolant level

1. Check coolant level every day.
   1.1 Check oil level while the roller is standing on a level surface and the engine is cold.
   1.2 You can read off the level of coolant on the expansion tank display. The water level must be between the top (FULL) and bottom (LOW) marks.
2. Top up coolant as required.
9.12.2 Topping up coolant

CAUTION
Danger of scalding from hot water / steam!

- Only open the tank once the engine and the coolant have cooled down.

1. Unscrew the tank lid of the radiator.
2. Add coolant with antifreeze until the tank is full.

9.12.3 Cleaning the radiator

1. Check the cooling ribs of the water tank for dirt and clogging.
2. Clean the ribs with water or blow them out with compressed air.

NOTE
Never clean the cooler with high pressure (e.g. powerful water jet).
9.13 Functional check

9.13.1 Sprinkler system

Check and adjust

1. Switch on sprinkler.
2. Check the nozzles on the sprinkler tubes in front and in back.

9.13.2 Roller drum scraper

Roller drum scraper

1. Tension the scrapers lightly by hand.

Scraper for pneumatic wheels

1. Adjust the scrapers with a clearance of 3-5mm.

1.1 The anti-adhesive must not get scraped off.
9.13.3 **Tire pressure**

1. Check the tire pressure on the pneumatic wheel axle.
2a. = 2-2.5bar: OK.
2b. < 2-2.5bar: Increase pressure by pumping in some air.
2c. > 2-2.5bar: Reduce pressure by letting air out.

9.13.4 **Air-intake filter**

**Dirt outlet**

1. Press the **dirt outlet** of the air-intake filter at least once a week to clean it of dirt.
Soiling indicator 1 If a red ring appears on the soiling display (1) during operation of the roller, you must:

2a clean the air filter cartridge,

2b or replace it.

Fig. 9-26 Soiling indicator

Air filter cartridge 1 Check the air filter cartridge for:

2a Damage: replace the cartridge.

2b Soiling: clean the cartridge.

Fig. 9-27 Air filter cartridge

Air intake 1 Check the air intake for:

2a Damage: replace the cowling.

2b Soiling: clean the air intake.
9.13.5 **Seat contact and emergency stop**

1. Put the operating lever into the neutral position.
2. Sit on the driver’s seat.
3. Start the engine.
   
   **3.1** The brake light (P) must extinguish at once.

4. Leave the seat.
   
   **4.1** After 0.7 sec., the brake light must light.

5. Switch off the engine.

---

**NOTE**

The emergency stop control lamp only lights when the emergency stop is pressed.

**NOTE**

The control lamp for the emergency stop circuit, operating lever neutral position and seat contact must extinguish after 2 seconds for delayed seat contact.

9.13.6 **Brakes (brake test)**

*Parking brake switch*

If the roller moves in spite of the actuated parking brake switch, you must perform the brake test.

1. Remove the brake hose from the front roller drum drive motor.
2. Seal the open hose end so that it can be pressurized.
3. Start the roller.

4. Press the parking brake switch.

4.1 The brake light (P) must extinguish quickly.

5. Test the forwards and the backwards drive.

Because the front brake remains activated, the roller does not move.

6. Switch the roller off.

7. Reinstall the brake hose.

8. Follow the same procedure for the rear drive motor.

9. Be certain that you have reconnected all brake hoses!

10. Start the roller.

10.1 The brake light (P) must extinguish quickly.

11. Test the forwards and the backwards drive.

There should be no problems.

---

**NOTE**

Damage to property through incorrect handling!

If the roller does not behave exactly as described, you have a problem with one or more brakes. The roller is no longer safe for operation.

- Have the roller repaired professionally.

*Pneumatic wheel axle*  If you own a roller with a pneumatic wheel axle, it is better to remove the center wheels. Please examine both motors simultaneously.
9.13.7 **Pendulum support**

Check the pendulum support once a year for excessive play.

1 Attach the roller to a crane (central lifting point).

The play can be checked by alternately applying and releasing upward pressure to the roller (visual inspection).

![Fig. 9-30 Pendulum support](image)

9.13.8 **Articulated joint**

Check the articulated joint once a year for excessive play.

1 Attach the roller to a crane (central lifting point).

The play can be checked by alternately applying and releasing upward pressure to the roller (visual inspection).

![Fig. 9-31 Articulated joint](image)

**Lubricating steering cylinder, bearing**

1 Rotate the roller’s steering fully to the stop in order to grease the cylinder.

2 Steer the roller briefly to the right and the left. This causes the bearing to be unloaded.

3 Clean the grease nipple (1) before greasing.
4 Connect the grease gun to the grease nipple.
5 Press grease into the bearing until it visibly begins to ooze out.
6 Put the protective cover back on.

**NOTE**

Damager to property due to increased wear!

- Regrease the bearing after every cleaning / steam cleaning of the roller.

*Fig. 9-32 Location of grease nipples on steering cylinder*
9.15 Lubricant table

9.18 Cleaning the roller

After completion of work, clean the roller:

- of major soiling;
- and the lower scrapers of deposits.

Regularly clean completely; at least once a week. When working on cohesive soils, or with cement and lime stabilizers, complete cleaning must be performed daily.
**NOTE**

While cleaning, observe the following:

- Do not use aggressive or flammable cleansing agents (e.g. gasoline or inflammable substances).
- Only work with the engine turned off.
- Do not directly subject electrical components or isolating materials to a steam jet when using a steam cleaner. Always cover these materials.
- When washing the roller, ensure that no water is sprayed into the air-intake filter.
- Before cleaning the roller with pressure cleaners using water, steam, etc., cover all openings into which the cleaning agent may penetrate. Remove these dummy flanges after cleaning the roller.

---

**DANGER**

Danger to life through runaway roller. Persons standing in the vicinity can be rolled over!

- Before cleaning the roller, be absolutely certain to secure it against unintentional rolling away.
10

Repair
10.1 Battery

NOTE Risk of cable fire or short circuit.

Keep to the proper sequence when removing or installing the terminal connections.

The battery charge level can be read in the multifunction display unit.

- Ignition on = battery voltage. The battery voltage should not fall below 10 volts while starting, otherwise the battery must be charged.
- Machine running = alternator charging voltage. The voltage should lie in a range of from 13 to 14.5 volts.

10.1.1 Replacing the battery

1. Loosen the (-) terminal and disconnect it (size 13).
2. Loosen the (+) terminal and disconnect it (size 10).
3. Loosen and remove the mounting bracket.
4. Lift the battery out of the engine compartment.
5. Set the new battery in place.
6. Connect the battery.
   6.1 Begin with the (+) terminal.
NOTE

The battery poles and terminals must be clean. If they are coated with a (whitish or greenish) sulfur crust they must be cleaned.

10.1.2 Starting with another battery (jumpering)

1. Connect the red cable to the (+) terminals of both batteries.
2. Connect one end of the green or black cable to the (-) terminals of both batteries.
3. Actuate the starter. Allow the engine to run.
4. Wait until the engine is idling smoothly and then disconnect the cables.
   4.1 Begin with the (-) terminal.
The battery poles and terminals must be clean. If they are coated with a (whitish or greenish) sulfur crust they must be removed and cleaned.

10.1.3 Charging the battery using a battery charger

1. Disconnect the battery.
2. Connect the battery charger.
   2.1 Observe the battery charger manufacturer’s manual.
3. Start with the (+) terminal when reconnecting the battery.

The battery poles and terminals must be clean. If they are coated with a (whitish or greenish) sulfur crust they must be removed and cleaned.

10.1.4 Long-term storage

If the roller is not in operation for more than two days, the battery must be turned off at the battery cut-off switch. This reduces the risk of battery discharge.

If no battery cut-off switch is fitted to your roller, remove the negative battery cable from the battery if a standstill period of more than two weeks is expected.

10.2 Fuses

**DANGER**

There is danger to life if the roller does not stop in hazardous situations!

- Fuses and safety switches must never be shorted.

**CAUTION**

Risk of injury through short circuit and cable fire when handling electrical parts!

- Always disconnect the power supply when working on the electrical system.

Before replacing the fuse, you must identify and remove the cause of the fault.
10.2.1 Engine compartment fuses

The fuses are located on the right of the engine, at the front between the engine and the water tank.

The fuse numbers are indicated on the fuse box.

Always replace a defective fuse (1) with a functioning fuse (2) of the same amperage (according to the label or color of the fuse).

![Fig. 10-5 Position of fuses in the steering column](image)

**NOTE**

Faulty installation can cause short circuiting or a cable fire.

- When replacing fuses, do not mix them up.

### 10.3 Replacing bulbs

#### 10.3.1 Replacing bulbs at the front

1. Open the hood, see *Opening the hood*, Page 88..

The bulbs of the low beam lights (1) and the parking lights (2) are now accessible.
Fig. 10-6 Dipped lights and parking lights:

**Dipped light**

1. Remove the plug from the rear of the lamp unit.
2. Remove the guard.
3. Press on the end of the securing clip to remove it.
4. Replace the defective bulb with a new one of the same type and power.
5. Put the guard back on the casing.

**NOTE**
The guard must sit firmly on the glass body of the low beam headlight unit in order to prevent water from entering.

**Parking light**

1. Pull the bulb out of the lamp holder.
2. Replace the defective bulb with a new one of the same type and power.

**Position light**

1. Remove the lamp housing of the position light (1).
   1.1 To do so, undo the screw in the center of the housing.
2. Replace the defective bulb with a new one of the same type and power.

**NOTE**
Do not touch the glass of the new bulb with your fingers. Sweat on your hands can burn into the glass and reduce bulb lifetime.
10.3.2 Replacing bulbs at the rear

At the rear, you have direct access to the work light (1) and the tail lights (2).

![Work light / tail light](image)

Work light

1. Remove the entire work light from the water tank.
2. Remove the plug from the rear of the lamp unit.
3. Remove the guard.
4. Press on the end of the securing clip to remove it.
5. Replace the defective bulb with a new one of the same type and power.
6. Put the guard back on the casing.

NOTE The guard must sit firmly on the glass body of the low beam headlight unit in order to prevent water from entering.

Tail light

1. Remove the lamp housing.
   1.1 To do so, undo the screw in the center of the housing.
2. Replace the defective bulb with a new one of the same type and power.

10.4 Gas strut

Gas struts are maintenance-free! They require no maintenance such as lubrication. They are designed for the respective requirements and work trouble-free for many years.
10.4.1 **Replacing gas struts**

**WARNING**
Risk of accident through hood falling down!

- Secure the hood before you replace the gas struts.
  - Support the hood with a rod.
  - Attach the hood to a crane by the handle.

---

**removal**

1. Use a screwdriver to lift the clips.

2. Pull the gas strut away from the ball joint.

---

**Fig. 10-9 Using a screwdriver, lift the clips and loosen the springs**

---

**installing**

1. The new gas struts can easily be installed by pressing them onto the ball joint.

1.1 The rod must face downward.

---

**NOTE**
Gas struts should not be installed if they have been damaged through mechanical manipulation.

- Welding on gas struts as well as dirt or paint on the piston rods can lead to failure of the units.
- Avoid modifications, manipulation, impacts, tensile loading, heating, painting over or removal of imprints.
- Do not install defective or improperly handled products.

---

**NOTE**
If gas struts are no longer needed, they must be disposed of in an environmentally appropriate manner. For this purpose, they will be drilled out to allow the compressed nitrogen to escape and to drain the oil they contain. See also *Removal and depressurization of the gas struts, Page 134*
11

Storage
11.1 Storage

11.1.1 Short-term storage

- Put the operating lever into neutral position.
- Secure the roller from unauthorized start-up and unintentional rolling away.
- Remove the ignition key.

11.1.2 Long-term storage

**Tab. 11-1 Long-term storage**

<table>
<thead>
<tr>
<th>defective components</th>
<th>precautions</th>
<th>Chapter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diesel engine</td>
<td>Observe the information in the “Long-term storage” section in the diesel engine manual.</td>
<td></td>
</tr>
<tr>
<td>Fuel (diesel)</td>
<td>Drain.</td>
<td>9.8.3</td>
</tr>
<tr>
<td>Battery cut-off switch</td>
<td>If the roller is not in operation for more than two days, the battery must be turned off at the battery cut-off switch. This reduces the risk of battery discharge.</td>
<td>8.7</td>
</tr>
<tr>
<td></td>
<td>If no battery cut-off switch is fitted to your roller, remove the negative battery cable from the battery if a standstill period of more than two weeks is expected.</td>
<td></td>
</tr>
<tr>
<td>Battery</td>
<td>Uninstall the battery and clean the outside.</td>
<td>10.1</td>
</tr>
<tr>
<td></td>
<td>Charge the battery once a month during standstill time.</td>
<td></td>
</tr>
<tr>
<td>Air filter unit, exhaust pipe</td>
<td>Cover the air filter unit or its intake opening and the exhaust pipe with adhesive tape. This prevents moisture from getting into the engine.</td>
<td></td>
</tr>
<tr>
<td>Hydraulic oil level</td>
<td>Drain the hydraulic oil completely. Fill up the hydraulic oil tank with fresh oil when putting the machine back into operation.</td>
<td>9.10</td>
</tr>
<tr>
<td>Steering cylinder</td>
<td>Lubricate the bearings of the steering knuckle and the front bearing of the steering cylinder with grease.</td>
<td>9.14</td>
</tr>
<tr>
<td></td>
<td>Lubricate the piston rod of the steering cylinder with grease guard.</td>
<td></td>
</tr>
<tr>
<td>Tires</td>
<td>Only combined rollers have tires. Relieve the pressure in tires (pneumatic wheels) if the machine is not being used for a prolonged period by relieving the pneumatic wheel axis with a wooden wedge so as to avoid flat spotting damage to the tires.</td>
<td></td>
</tr>
</tbody>
</table>

11.2 Winterization (risk of freezing)

The purpose of winterization is to ensure that cold air temperatures of below 0 °C do not damage the sprinkler system.
11.2.1 Draining the water tank and sprinkler

The water tank and the sprinkler unit must be drained.

1. Undo the quick-release coupling of the sprinkler hose.
   1.1 Press the black plastic ring against the screw connection.

2. Pull the hose off the coupling.

3. Drain off the water.

4. Switch on sprinkler.

5. Let the water pump run briefly.
   5.1 This pumps the remaining water out of the pipes.

---

Fig. 11-1 Draining sprinkling water

11.2.2 Removing the water filter

The plastic container must be removed if there is a risk of freezing. The water would crack the container if it were to freeze.

1. Unscrew the plastic container (1) of the water filter.

---

Fig. 11-2 Water filter

---

**NOTE**

Press the battery cut-off switch if storing for more than two days.

If no battery cut-off switch is fitted to your roller, remove the negative battery cable from the battery if a standstill period of more than two weeks is expected.
Transport
12.1 Transport

### Joint protection

**Blocking the joint protection**

1. Release the lower part of the joint protection (1).
   1.1 First, remove the compression spring (2) and then the lock bolt (3).
2. Carefully turn the roller steering wheel until the joint protection comes in line with the opposite loop.

**NOTE**
You must start the roller to be able to move the steering wheel.

### DANGER

Risk of crushing through presence in the pivoting area (danger zone)!
- The articulated joint lock (joint protection) must be fitted before lifting the roller for transport.

3. Hook the joint protection into place.
4. Secure the joint protection with the lock bolt (3).
5. Secure the lock bolt with the compression spring (2).

**DANGER**

Risk of crushing through presence in the pivoting area (danger zone)!
- As soon as the roller is aligned, shut it off again.

*Fig. 12-1 Joint protection open / joint protection locked in place*
12.1.2 Lifting at the 1-point lifting eye

1. Bring the joint protection into place.
2. Lift the roller vertically with suitable hoisting tackle.
   
   2.1 Use suitable hoisting tackle having the same length as the ARX. 1.

The 1-point lifting eye is designed for a WLL of 1.7 tons (Working Load Limit).

![Fig. 12-2 1-point lifting eye](image)

**DANGER**

Danger to life through suspended loads!

- Persons should not linger beneath suspended loads!

**NOTE**

The roller will weight less if the water tanks are drained before transporting.

12.1.3 Securing the roller on the transporter

1. Bring the joint protection into place.
2. Attach the lashing straps to the lashing rings on the roller and on the truck
   
   2.1 Lashing method: Direct lashing/diagonal lashing as shown in photo
   
   2.2 Use a lashing strap with a permissible tensile force of LC = 2,500 daN

The lashing rings on the roller are designed for a permissible tensile force of 2,500 daN.

Permissible angle ranges for diagonal lashing:

- $0^\circ \leq \alpha \leq 60^\circ$
- $30^\circ \leq \beta \leq 60^\circ$
12.1.4 Center of gravity

The center of gravity relevant to transport is located 670 mm from the floor and approx. in the center of the roller, depending on the fill level of the diesel or water tanks.
Fig. 12-5 Roller’s center of gravity
Disposal
13.1 Introduction

The roller must be disposed of properly; ask your authorized dealer.

13.2 Removal and depressurization of the gas struts

Eye injury!

Because of the high internal pressure, chips and oil can spatter from the site of sawing or drilling.

- Wear eye and face protection.
- Cover the site of the saw cut.

Environmental hazard through operating materials!

Gas struts are filled with oil.

- Do not allow any liquids get into drains, soil or the environment.

In case of disposal, pressurized gas struts must be depressurized according to the following regulations:

1. Fasten the pressurized tube between two prismatic jaws without deforming it and in such a way that the dimension X is at least 25mm (see below).

2. To depressurize:

2a. Slowly cut the pressurized tube open at the points indicated using a handsaw or,

2b. Drill a hole in the tube using a drill with about a 3 mm diameter.
Fig. 13-1 Removal and depressurization of the gas struts

1. Saw cut / drilled hole
2. Saw cut / drilled hole

Piston rod
Pressurized tube
Bottom

1. saw cut / hole position: Cut or drill into the pressurized tube about 20mm from the bottom.
2. saw cut / hole position: Cut or drill into the pressurized tube in the bead.

NOTE

If disposal according to these regulations is not possible, ask your authorized dealer.
