Husqvarna Floor Solutions provide durable, easily maintained and versatile concrete floor finishes

## Husqvarna Superfloor

Husqvarna Superfloor is a process that includes a complete concept of machines, tools and chemicals. These are used together to create a mechanically refined, polished and diffusion open concrete surface with defined surface metric results, meeting the daily demands on a professional floor surface for industries, retail and the public sector.

It is available in four pre-defined finishes and degrees of aggregate exposure: Platinum, Gold, Silver and Satin.

### Platinum

Create a smooth, even, highly polished concrete floor with a high level of aggregate exposure and unmatched resistance to wear. Platinum is the most popular surface finish and is a good choice for most applications.

### Gold

Create a highly polished concrete floor with a low to medium ('fine') level of aggregate exposure. The floor is not ground as deep as with Platinum but polished to the same gloss. Is a good choice for concrete floors that are already smooth and even.

### Silver

Create a matte concrete floor with a high level of aggregate exposure and exceptional strength. Silver is a matte variant of Platinum with the same grinding depth for when you do not need or want a highly reflective floor finish.

### Satin

Create a medium gloss concrete floor with a low to medium ('fine') level of aggregate exposure. The result is a floor that offers functionality and low maintenance but is still aesthetically pleasing.

## Husqvarna Hipertrowel

As specialist in polishing concrete floors, you sometimes need a faster polishing method than using a planetary floor grinder. The Hipertrowel method is ideal for industrial floors from 500m<sup>2</sup> and up. Both newly poured slabs and older, pre-existing floors can be processed with the Hipertrowel system. The Hipertrowel system allows you to product a smooth, functional dust-free floor with high reflectivity at the speed of a ride-on finishing trowel.
